Objective

Motivated Full-Stack Developer with strengths in Node, React, JavaScript, and database management. Passionate about creating clean, scalable code and solving real-world problems through technology. Looking for a challenging role that allows me to leverage both front-end and back-end expertise while expanding my technical capabilities.

Education

College Of IT Management Education (CIME), MCA	Sept 2021 – May 2023
Nimapara Autonomous College, B.Sc in mathematics	Sept 2018 – May 2021
Ratanpur Science College, CHSE	Sept 2016 – May 2018

Skills

Languages: HTML, CSS, JavaScript, Tailwind, React.js, Node.js, Java

Database: MySQL, PostgreSQL

Experience

Backend Developer, Total Technology System July 2024 – Sept 2025

- Developed and maintained backend systems using **Node.js**, **Express**, and **MySQL** to improve performance, stability, and scalability.
- Built and optimized **RESTful APIs**, ensuring smooth integration with frontend applications.
- Improved system performance through **database optimization**, efficient query handling, and code refactoring.
- Implemented strong **authentication, authorization, and security best practices** for protected data access.

Projects

IT Tools: (Hospital Management System)

- Hospital Management System is a web-based platform designed to streamline and digitalize hospital operations. It helps manage patient records, doctor schedules, appointments, billing, and inventory efficiently. This system enhances coordination, improves healthcare delivery, and ensures accurate tracking of all hospital activities.
- Tools Used: React.js, Tailwind, Node.js, Express.js, MySQL

Learning Management System

- For educational institutions, corporate training, or professional development, an LMS project seeks to streamline, manage, and improve the learning process. For all kinds of learners, an LMS facilitates an organized and effective learning environment by offering resources for course development, delivery, assessment, and reporting.
- Tools Used: React.js, Node.js, Express.js, MySQL

Urban Services

- An Urban Services project aims to simplify and modernize the management of essential community services such as cleaning, plumbing, electrical work, and home maintenance. It provides a centralized platform where users can easily request services, track bookings, and connect with verified service providers.
- It helps improve service delivery by enabling faster response times, organized workflows, and better coordination between customers and service professionals.
- Tools Used: React.js, Node.js, Express.js, MySQL

Training

Naresh I Technologies

Completed 6-month training in Java, OOPS, DB integration, and algorithms with hands-on experience.
